DETAILED ACTION

Response to Amendment

1. Acknowledgment is made of the amendment filed Jun. 19, 2008 ("Amend."), in which: claims 2, 3, 16, 20 and 24 are cancelled; and claims 1, 4 and 6 are amended. Claims 1, 4-15, 17-19, 21-23, 25 and 26 are currently pending and an Office action on the merits follows.

Response to Arguments

2. Applicant's arguments with respect to claim 1 have been carefully considered and are persuasive. Specifically, applicant has amended claim 1 to preclude examiner's interpretation of the claimed "first voltage" as being the key-up voltage and the claimed "second voltage" as being the key-down voltage (Amend., pp. 9-11). Rather, claim 1 as amended now recites wherein the claimed "first voltage" corresponds to a key being pressed and the claimed "second voltage" corresponds to a key not being pressed (Amend., pp. 9-11). Thus, examiner respectfully submits that claim 1 is currently in condition for allowance for the same reasons as indicated in the previous Office action mailed Mar. 21, 2008, with respect to claims 7, 17 and 26.

Allowable Subject Matter

3. Claims 1, 4-15, 17-19, 21-23, 25 and 26 are allowed.
4. The following is an examiner's statement of reasons for allowance:

As to claim 1, the prior art of record fails to teach or suggest a keyboard comprising: a key module comprising a plurality of key cells each having an output end being selectively connected to one of a first voltage while being pressed and a second voltage while not being pressed; a detect circuit for generating a control signal whenever

one of the output end of the key cell becomes connected to the other of the second voltage and the first voltage; and a processor for controlling a parallel-to-serial register according to the control signal without polling for a status of the key cells during a time period between any key cell being connected to the first voltage and then connected to the second voltage, as claimed.

As to claims 7 and 17, the prior art of record fails to teach or suggest a keyboard comprising: a key module; a detect circuit for generated a control signal when a key is pressed and released; and a processor for controlling the parallel-to-serial register only upon reception of the control signal without polling for a status of the key cells during a time period between any key cell being pressed and then released, as claimed.

As to claim 26, the prior art of record fails to teach or suggest a keyboard, comprising: a plurality of keys; a plurality of capacitors; an amplifier, a first comparator; a second comparator; a logical OR gate, coupled to a processor, outputting a control signal to indicate that one of the key cells has been pressed and to indicate that one of the key cells has been released; and a parallel-to-serial register coupled to the processor, without the processor polling for a status of the key cells during a time period between any key cell being pressed and then released, as claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
